

## South Western Corridor A4 Fivemiletown Bypass

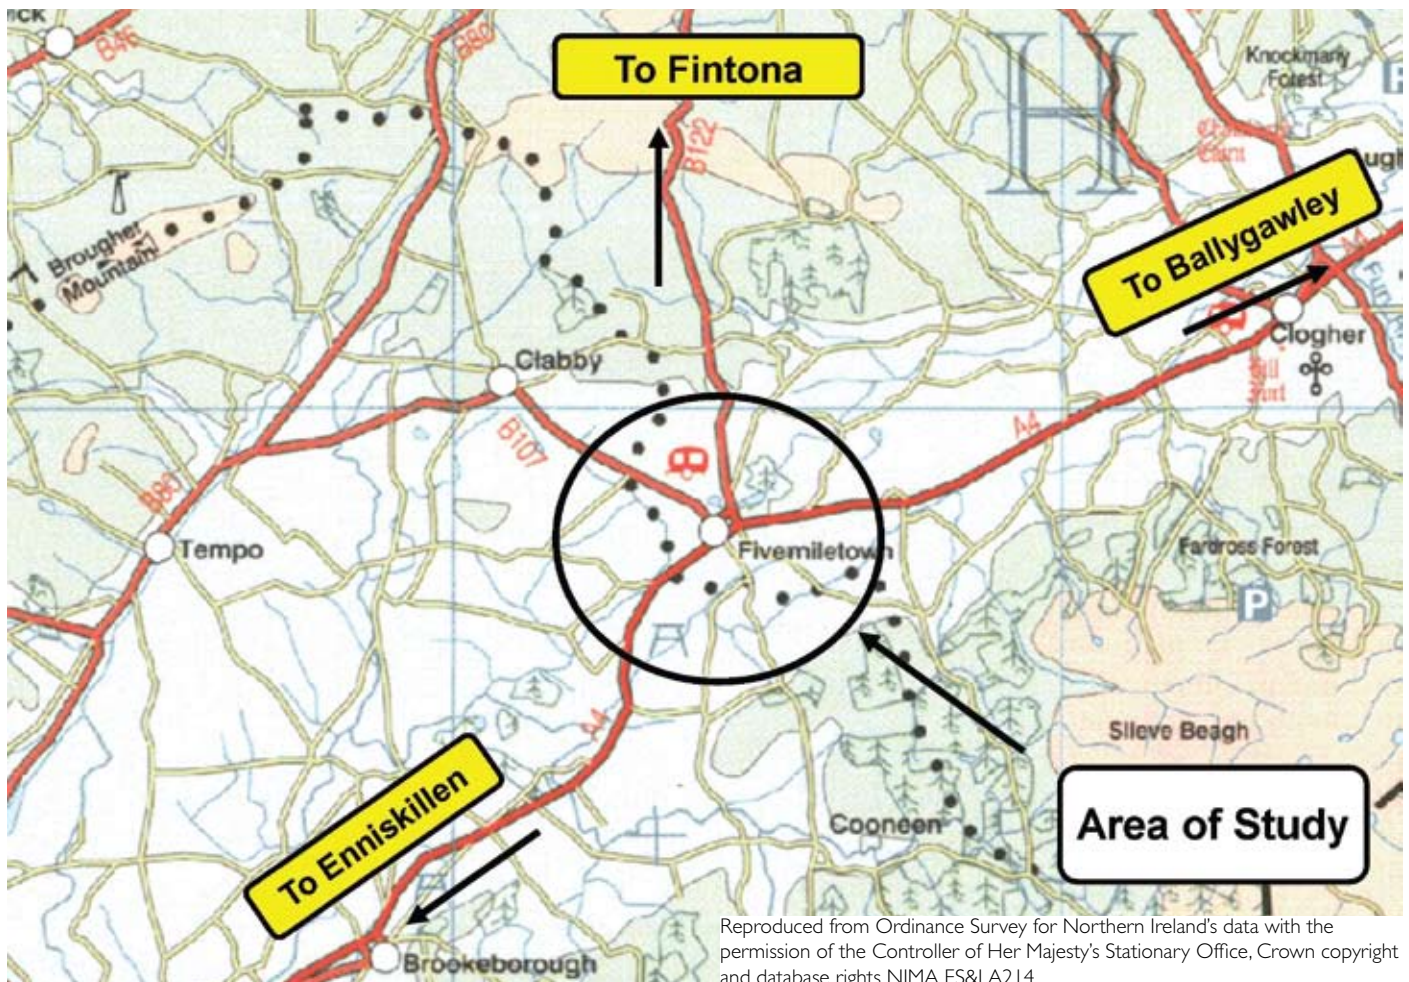

### Need for Scheme

The A4 is part of the South Western Key Transport Corridor that forms part of the Regional Strategic Transport Network. This Corridor provides access between the East and the Fermanagh Lakelands and cross border regions.

The existing A4 at Fivemiletown is often congested and traffic delays occur through the village during both peak and off-peak times of the day.

### The Proposed Scheme

The proposed scheme will be approximately 3.4 km in length and consist of a 2+1 single carriageway. The proposed new transport link will allow a considerable amount of traffic to avoid Fivemiletown therefore reducing journey times for through traffic and providing much needed overtaking opportunities in both directions.

## Benefits

The key benefits of the scheme are:

- Reduced traffic congestion through Fivemiletown.
- Facilitation of a more efficient movement of traffic on the A4.
- More reliable journey times on the A4.
- Reduction in noise and improved air quality.

## Progress

The scheme is listed in the Department for Regional Development's Investment Delivery Plan for Roads (IDP). The IDP estimates that it will be delivered within the period 2013 to 2018.
